

HITCAP PROJECT DOCUMENTATION

1. Ideation Phase

Import Data using Transform Maps (Spreadsheet)

The project idea was developed from the requirement to efficiently import structured employee data from an external spreadsheet into the ServiceNow platform. The process is designed to handle bulk employee data accurately and efficiently.

The proposed solution uses Import Sets and Transform Maps. Spreadsheet data is first loaded into an Import Set table, which acts as a staging area. A Transform Map then maps the source fields to the appropriate fields in the Employee Test target table. Coalesce is used to identify existing employee records and avoid duplicate records during repeated imports.

Project Idea

- Import structured employee data from an external Excel spreadsheet into ServiceNow.
- Use an Import Set table as a staging area for incoming data.
- Map spreadsheet fields to the corresponding Employee Test table fields using a Transform Map.
- Use Coalesce to update existing records and prevent duplicate employee records.
- Create reports and a dashboard to provide a clear view of employee information and import results.
