

HITCAP PROJECT DOCUMENTATION

6. Project Documentation

Import Data using Transform Maps (Spreadsheet)

The project documentation records the requirements, design, configuration, data transformation, duplicate-handling process, validation, reporting, and dashboard steps so that the solution can be understood and maintained.

Data Import and Transformation Documentation

Employee data is loaded into the Employee Import staging table and transformed into the Employee Test target table using the Sample Spreadsheet Import Transform Map. The following screenshots document the completed ServiceNow implementation.

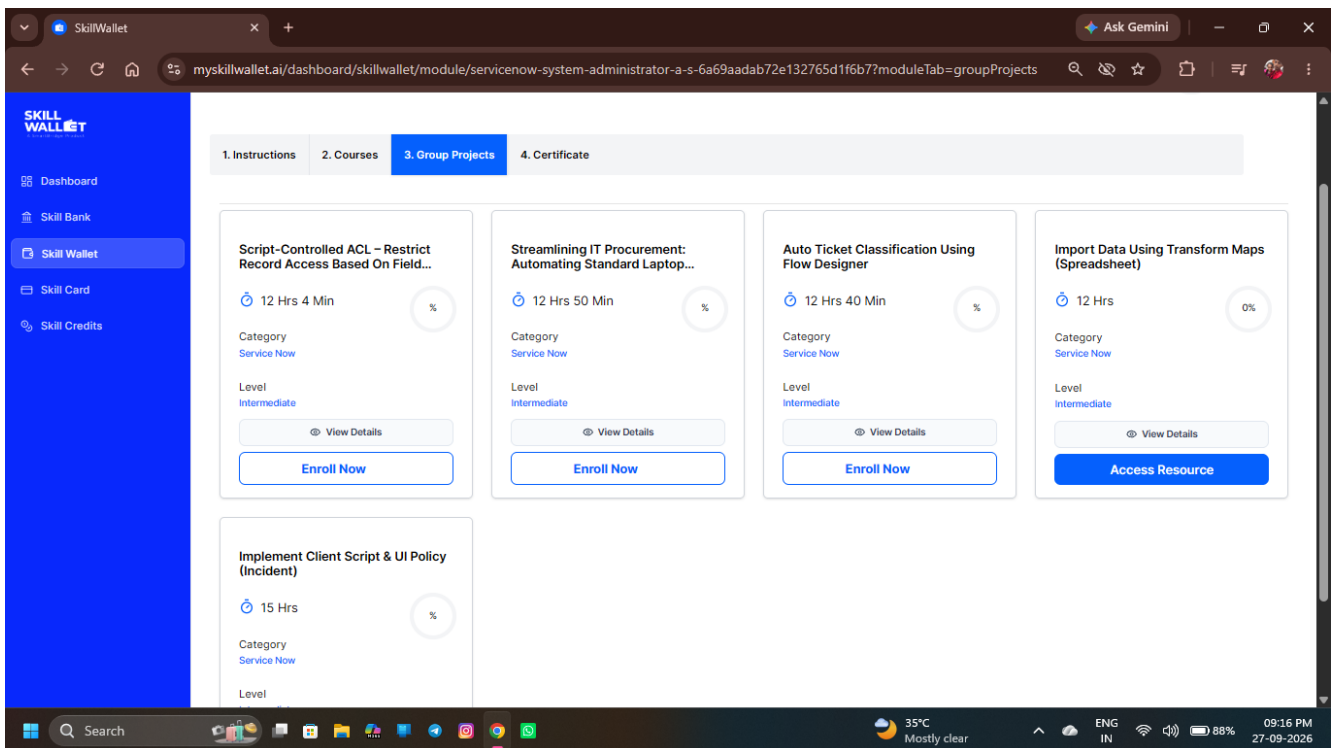

Figure 6.1 – Project module showing Import Data Using Transform Maps (Spreadsheet).

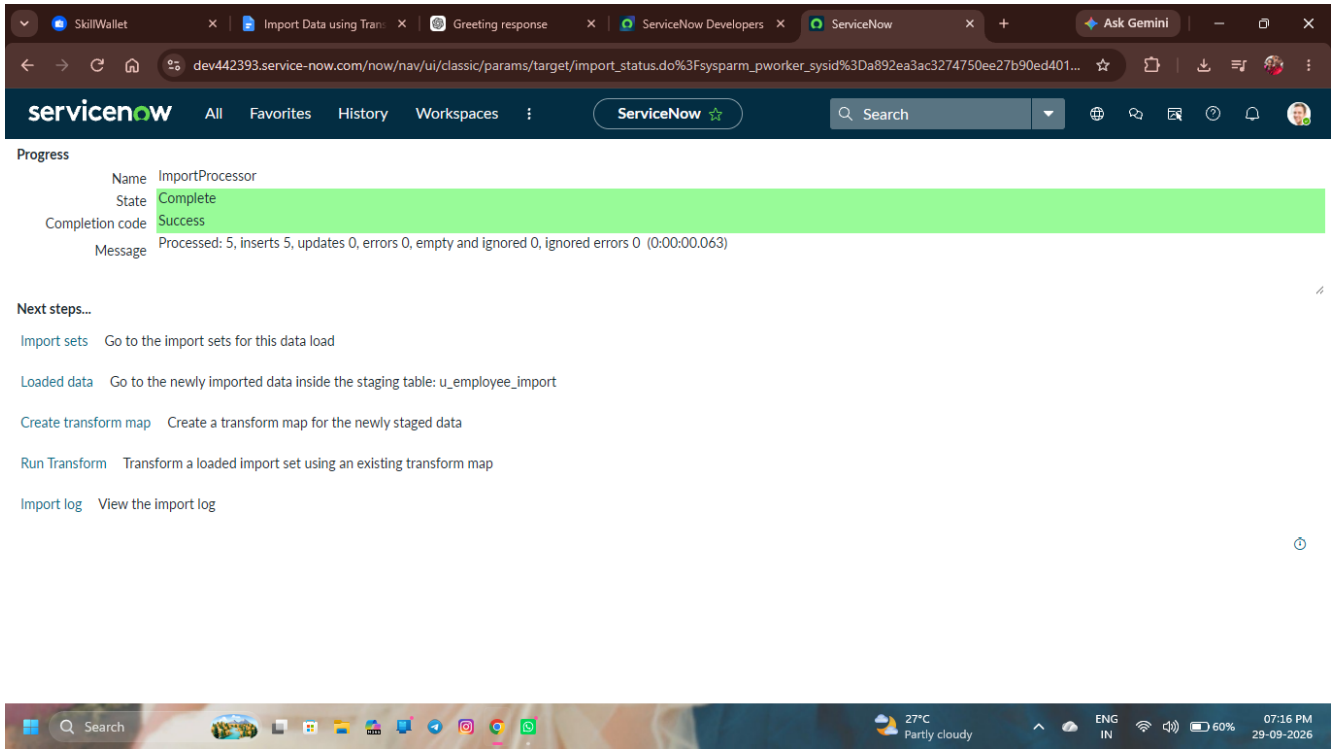

Figure 6.2 – Import Set processing completed successfully with 5 records inserted.

The screenshot shows the ServiceNow interface with the 'Employee Test' list. The table displays five records with columns for Employee ID, Employee Name, Department, Email, and Location. The records are as follows:

Employee ID	Employee Name	Department	Email	Location
SB002	User2	ServiceNow	user2@gmail.com	Tamilnadu
SB005	User5	ServiceNow	user5@gmail.com	Tamilnadu
SB004	User4	ServiceNow	user4@gmail.com	Tamilnadu
SB001	User1	ServiceNow	user1@gmail.com	Tamilnadu
SB003	User3	ServiceNow	user3@gmail.com	Tamilnadu

Figure 6.3 – Employee Test table displaying the imported employee records.

The screenshot shows the 'Personalize List Columns' dialog box open over the Employee Test list. The dialog has two columns: 'Available' and 'Selected'. The 'Available' column contains 'Created', 'Created by', 'Tags', 'Updated', 'Updated by', and 'Updates'. The 'Selected' column contains 'Employee ID', 'Employee Name', 'Department', 'Email', and 'Location'. The 'OK' button is highlighted.

Available:

- Created

- Tags
- Updated
- Updated by
- Updates

Selected:

- Employee ID
- Employee Name
- Department
- Email
- Location

Options:

- ☒ Wrap column text
- ☐ Compact rows
- ☐ Active row highlighting
- ☒ Modern cell coloring
- ☒ Enable list edit
- ☒ Double click to edit

Buttons: Reset to column defaults, Cancel, OK

Figure 6.4 – Employee Test list columns configured with Employee ID, Employee Name, Department, Email, and Location.

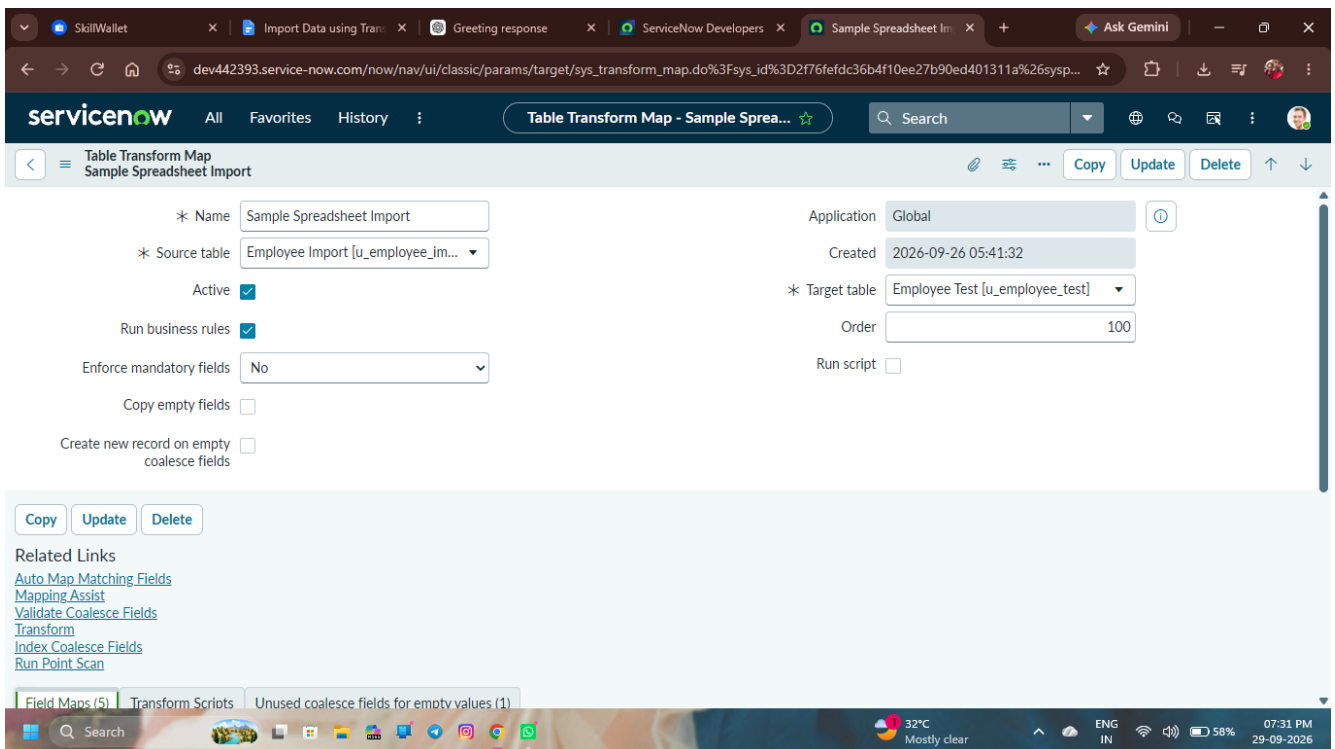

Figure 6.6 – Transform Map configuration showing Employee Import as the source table and Employee Test as the target table.

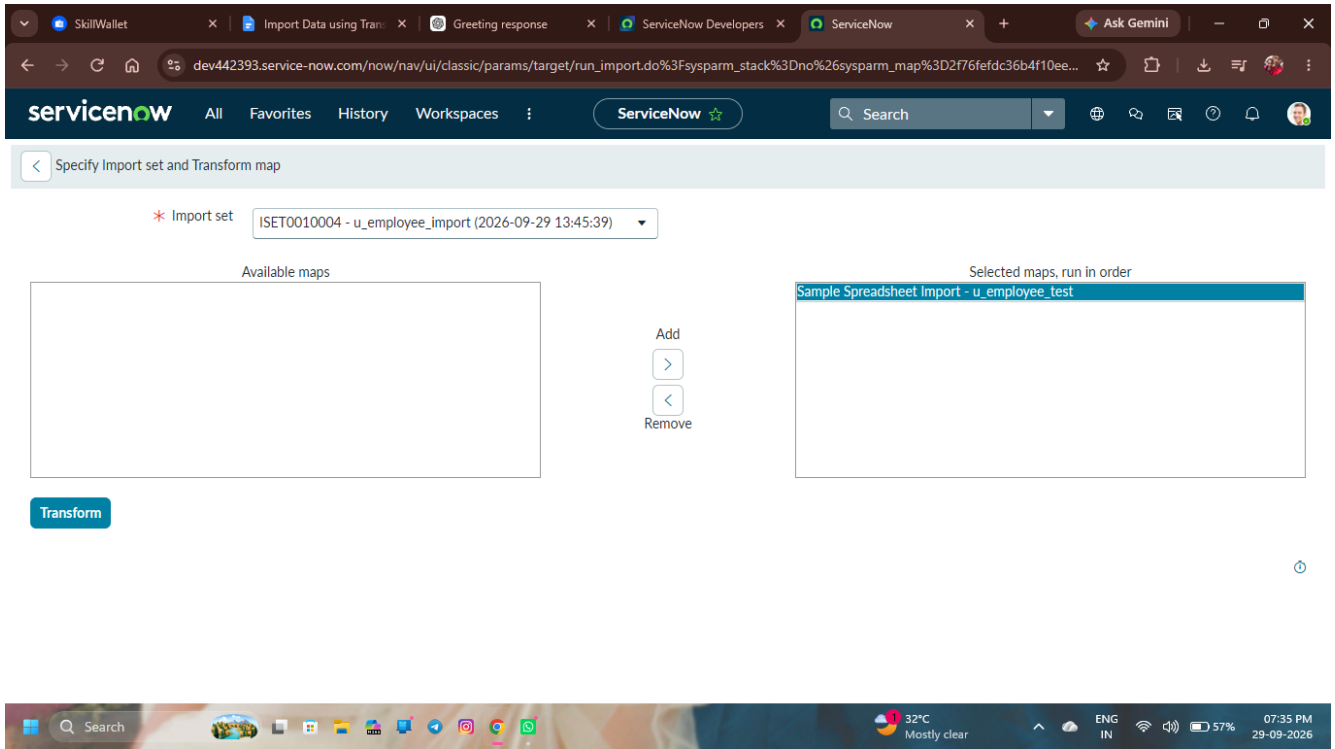

Figure 6.7 – Run Transform screen showing the selected import set and Sample Spreadsheet Import map.

Coalesce Validation

The Transform Map uses field mapping and Coalesce configuration to identify existing records and control duplicate creation during repeated imports. The screenshots above provide evidence of the configured mapping and transformation process.

Validation and Result

The import process completed successfully, and the Employee Test table contains the imported employee records. The screenshots document the staging import, transformation configuration, target records, and execution steps.
