

# HITCAP PROJECT DOCUMENTATION

## 7. Project Demonstration

### Import Data using Transform Maps (Spreadsheet)

The project demonstration is an end-to-end walkthrough of spreadsheet upload, transformation, duplicate handling, validation, reporting, and dashboard visualization.

#### Demonstration Steps

- Open Load Data and upload the employee Excel spreadsheet.
- Select the Employee Import table and submit the data.
- Run the Sample Spreadsheet Import Transform Map.
- Verify the transformation status as completed and successful.
- Open the Employee Test table and verify the imported employee records.
- Upload additional data containing both existing and new Employee IDs.
- Verify that existing records are updated and new records are inserted.
- Upload the same data again and verify that unchanged records are ignored.
- Open the three reports and verify the displayed employee information.
- Open Employee Analytics Dashboard and verify that all three reports are displayed.
- Final Outcome

| Input / Action                            | Expected Result                                                   |
|-------------------------------------------|-------------------------------------------------------------------|
| Initial spreadsheet import                | Employee records are created in Employee Test.                    |
| Existing Employee ID with changed values  | Existing employee record is updated.                              |
| New Employee ID                           | New employee record is inserted.                                  |
| Same unchanged spreadsheet uploaded again | Records are ignored with no duplicate creation.                   |
| Reports                                   | Department, location, and employee list information is displayed. |
| Dashboard                                 | All three reports are available in Employee Analytics Dashboard.  |
